X-Tempo pok Wireless Remote Control Pedal Board for Mac and PC Audio Workstations

X-TEMPO DESIGNS is presenting the pok, the world's first wireless DAW foot controller, at Summer NAMM. The pok allows DAW users to control their playback or recording session hands-free.

For solo studio musicians, the pok allows for new freedom in recording. Recording sessions can be run from an iso booth or remote location up to 100 feet away from the DAW. Live performers can use the pok to foot-control the computer up to 100 feet away from stage, without power or data cabling.

The pok uses wireless USB technology in concert with a DAW's command ("shortcut") keys. The pedal buttons are customizable and compatible with most Mac or PC-based DAWs including Pro Tools, Digital Performer, Logic, Cubase and Ableton Live. The included pok Editor Software makes it easy to add, remove, or re-assign button functions to suit the user's preferences. Different function profiles can be stored to disk and recalled as needed. Web updates are available to registered owners.

"The pok marks the arrival of a missing link that allows performers to keep their hands on their instrument instead of on their computer keyboard during performance," said X-Tempo Designs founder and CEO Trevor Nathaniel.

The X-Tempo **pok** is designed, built and supported in the U.S.A. It has a two-year manufacturer's warranty and is available for purchase directly from the X-Tempo website or from an authorized reseller. NAMM Booth 821
