### X-Tempo Designs to debut the **pok** at Summer NAMM '07

Los Angeles, CA, June 1, 2007 -- X-Tempo Designs, LLC will be pleased to introduce the **pok** to the pro audio and music products community at the Summer 2007 NAMM Show in Austin, Texas, July 27-29 (Exhibitor Space 219). The **pok** is the world's first completely wireless, patented DAW foot controller – allowing users to control their DAW recording session hands-free. For its many pro musician users and endorsers, the **pok** is already becoming a must-have in the studio and on the stage.

For solo studio musicians, the **pok** creates a new freedom in recording. Recording sessions can be run from an iso booth or remote location several feet from the DAW. With no power or data cable required, live performers and DJs using a DAW can use the **pok** to foot-operate the DAW from the stage – a different kind of pedal board with a new world of functionality.

The **pok** uses wireless USB technology in concert with a DAW's command ("shortcut") keys. The pedal button functions are customizable and support Mac or PC-based DAWs such as Pro Tools, Digital Performer, Logic, Cubase, GarageBAnd and Ableton Live. The **pok** Editor Software is included with the unit and makes it easy to add, remove or re-assign button functions to suit the user's preferences. Different function profiles can be stored to disk and recalled as needed. The **pok** ships with Pro Tools as its default profile – ready to use in minutes right out of the box.

X-Tempo Designs Founder and CEO Trevor Nathaniel says, "The **pok** marks the arrival of a missing link that allows performers to keep their hands on their instruments, instead of on their computer keyboard during recording. This new freedom enhances creative flow while operating their DAW session. The **pok** is as relevant to the 20-year old Hip Hop producer as it is to the industry savvy old dog in search of new tricks."

American-made and engineered by musicians for musicians, the **pok** is a useful DAW tool designed to meet a real need and available now for purchase at [www.x-tempozone.com](http://www.x-tempozone.com).
