PS Summer NAMM 2007 – Part 1

July 31, 2007

A big hit at the show was the new *pok*, by X-Tempo Designs. The *pok* is a hands-free, customizable remote control for DAWs. It comes programmed for ProTools, but the software includes presets for transport and recording control over Cubase, Sonar, and other leading audio applications. There are plenty of wireless transport controllers out there, but this is the first we've seen that is completely foot-operable, meaning that you can go from take to take with a simple UNDO, RTZ, REC, without ever putting down your sticks or picks.
