X-Tempo Designs, LLC Announces the World's First Wireless Remote Foot Control for Mac and PC Digital Audio Workstations

Los Angeles, CA, March 26, 2007 -- X-Tempo Designs, LLC is pleased to introduce the world's first completely wireless, patented DAW foot controller called the **pok** (pedal operated keyboard).

The **pok** allows users to control their DAW recording session hands-free. For solo studio musicians, the **pok** creates a new freedom in recording. Recording sessions can be run from an iso booth or remote location up to 70 feet from the DAW. With no power or data cable required, live performers and DJs using a DAW can use the **pok** to foot-operate the DAW from the stage – like a traditional pedal board with a whole new world of functionality.

The **pok** uses wireless USB technology in concert with a DAW's command ("shortcut") keys. The pedal button functions are customizable and support Mac or PC-based DAWs such as Pro Tools, Digital Performer, Logic, Cubase and Ableton Live. The **pok** Editor Software is included with the unit and makes it easy to add, remove or re-assign button functions to suit the user's preferences. Different function profiles can be stored to disk and recalled as needed. The **pok** ships with Pro Tools as its default profile - ready to rock right out of the box.

X-Tempo Designs Founder and CEO Trevor Nathaniel says, "The **pok** marks the arrival of a missing link that allows performers to keep their hands on their instruments, instead of on their computer keyboard during recording. This new freedom enhances creative flow while operating their DAW session. The **pok** is as relevant to the 20-year old Hip Hop producer as it is to the industry savvy old dog in search of new tricks."

American-made and engineered by musicians for musicians, the **pok** is a useful product designed to meet a real need and available now for purchase at www.x-tempozone.com.
