

X-Tempo Designs Introduces the pok to Winter NAMM

X-Tempo Designs is proud to introduce their flagship foot controller, the **pok** at winter NAMM in January 2008 in Anaheim.

The **pok** is a wireless control surface pedal board allowing musicians, DJ's, producers, live performers and other DAW users to remotely foot-control their computer without being near the computer keyboard.

For solo studios, the **pok** creates a new freedom in recording. Computer recording and playback sessions can be controlled from an iso booth or other remote location. Live performers, bands and DJs using a DAW can use the **pok** to foot-operate track playback on stage leaving their hands free for performance.

The pedal button functions are customizable, and support popular Mac or PC-based DAWs including Pro Tools, Logic, Ableton Live, Digital Performer, Cubase and others. Function configurations may be edited, stored to disk and recalled as needed.

As well as receiving glowing product reviews in the press, artists have hailed the **pok** as "a must-have", "seriously useful", "time saving, headache-saving", "a blessing for guitarists", "the glue in my live setup" and "my new best friend"...

The **pok** is designed and manufactured in the U.S. and backed by a 2-year manufacturer warranty. M.S.R.P. is \$599.

NAMM Booth: 1107
